## Catwalk and Tower Engineering Bulletin

### Product Upgrade: Catwalk Cross Member Upgrade for #2 and #4 Catwalk Systems

Chief Agri Industrial is pleased to announce that the cross members for the #2 and #4 catwalk systems have been upgraded. The new cross members allow for conveyors to be supported every 10 feet which is every third cross member. Prior to this, depending on the weight of the conveyor, supports needed to be placed on every cross member or every other cross member. Supporting the conveyors every 10 feet is consistent with what is recommend by Chief for drag conveyors as well as other manufacturers. Customers also prefer conveyors supported every 10' so that they can change the bottoms of the conveyors without removing supports. Catwalk package part numbers remain the same as they were before.
