# A STRONGER FLOOR WITH ONE OF THE BEST DRYING SYSTEMS

Chief is the exclusive distributor of ALL SIZE Perforated Flooring. Paired with Chief Bins and Caldwell Fans, you get a system that installs quick and will maintain your for grain for many years to come.

.050

## Perforation Sizes

In the areas where canola or other small seed crops are part of the rotation, the .050 is the most popular aeration floor for flat bottom bins. The .050 flooring has 15.69% open area.

.094

The .094 floor is the perfect choice for cooling and drying corn, sunflowers, and other large seed crops. With 16.75% more open area, the .094 can blow a lot of hot air for a small price.

Shallower corrugations in our floors allows for easier bin clean-out. Bin sweeps are able to clean the floor more completely than other floors. Other floors' deeper corrugations causes sweeping out your bin to be much more difficult. Grain is constantly being trapped in the floor and pushed down, which means more sweeping time for you. ALL SIZE flooring makes it quick and simple.

## Syntiro Support

The Syntiro support system is the latest in aeration floor supports. The quick connections and long spans mean a fast and easy install. Engineered to aid in efficient airflow, the Syntiro system uses half the typical number of support rows. Even with fewer supports, ALL SIZE floors can handle much more load than similar supports. After installing, the flooring simply lays flat on the support without having to snap in, allowing faster install. Supports are 11 3/4" tall allowing for auger tunnels.

Syntiro's locking feature allows the supports to be quickly connected and provides strength and support without movement.

When overlapping supports, our spring steel clips keep the supports together. Their easy clip-on style will not pop off during installation because of the jagged teeth that grip the metal for a secure lock.

## Finish It Off

The 20" ALL SIZE ribbed flashing is spliced for smaller diameter bins and non-spliced for larger bins. The perforated ribs allow consistent airflow as well as superior strength when a bin sweep is used.

The "T" track flashing bridges the gap between your ALL SIZE floor and any flat surface like auger clean-outs, tunnels, and pits.
