**NOTE:** Metric ton capacity is based on a density of 56 lbs./bushel (721 kg/m<sup>3</sup>).  
All capacities are based on a 6% compaction factor unless otherwise noted.

## Chief's "W" stiffeners lead the competition in strength

Designed to support the vertical load, the "W" stiffener system provides additional strength, allowing sidewall height to exceed 100 feet (30.48 m). It also enables our bins to easily support overhead catwalks and conveyors.

## J-Rib Roof Design

Chief interlocking J-Rib roof is a structured design to meet your peak load requirements.

Roof panels that utilize a 2.5" (6.35 cm) interlocking J-Rib design provide reduced construction time while maintaining outstanding strength.

The structured J-Rib roof is available with upgrades up to 100,000 lbs. peak load.

## CB-40

Wind and seismic upgrade available.

Designed for single pass sweep.

100k roof available.

Up to 1 million bushels.

Bolts and serrated nuts with a 1000 hour salt spray test coating include conical washer for complete sealing.
